

Natural way of maintaining your waterless urinals.

Waterless Urinal Oil

WATER AND MONEY SHOULD NEVER BE WASTED

Most business premises waste more water than they realize. Urinals are one of the worst offenders when it comes to wasting water and can account for up to 20% of a commercial buildings water use. The average urinal wastes about 150,000 liters of water a year. When you multiply that by the number of urinals in your work place, that adds up to a massive volume of precious fresh water every year being flushed down the drain.

In most new office buildings to help reduce the amount of water used, waterless urinals are installed to minimize the amount of water being wasted. As no water is used to flush the urinal, a cartridge installed in the base of the urinal contains a small amount of oil which floats on top to create a seal so that no offensive odours can enter the washroom.

While the oil is sitting on top, the urine or water entering the cartridge passes through the oil into the cartridge where it can stay there for days or weeks depending on the traffic volume to the washroom. As there is no large volume of water flushing the urinal or if the plumbing is not installed correctly, urine can pool creating serious problems like struvite build up. Struvite is a large build up of uric salt and sludge in the urinal plumbing.

Our oil contains specifically selected patented microbial which produce powerful enzymes to gently digest organic matter like uric salt/sludge to keep the urinal and plumbing odour and blockage free.

Staff, visitors and customers need to use a washroom at work, in a pub, club or restaurant, kids can become excited at school, the elderly can experience continence problems with age - urine issues are experienced everywhere! Our urinal blocks are a powerful, safe to use and effective, environmentally friendly solution for trouble free urinals.

Waterless Urinal Oil

Waterless Urinal Oil

Environment

This product has been formulated from ingredients which are:

- ✓ Phosphate Free
- ✓ Non-Corrosive
- ✓ Non-Flammable
- ✓ pH Neutral
- ✓ Minimal VOC's (volatile organic compounds)
- ✓ No toxic, harmful or ecologically suspect ingredients: no ammonia, glycoethers, nonylphenol ethoxylates, caustics, chlorine, heavy metal agents, phthalates or masking agents.

All containers can be cleaned and reused or returned to Biosolve Technologies to reduce plastic usage and waste. The containers can also be recycled.

Benefits

- ✓ Australian Owned & Made.
- ✓ Fast acting and effective.
- ✓ Non-hazardous formula - simple and safe to use.
- ✓ Removes offensive urine odours.
- ✓ Reduces blockages.
- ✓ Removes the need for harsh chemical cleaners.
- ✓ Environmentally Friendly
- ✓ Reduces your carbon footprint.

Usage Recommendations

Application

The waterless urinal oil sealant creates a barrier so that offensive odours are prevented from escaping back into the washroom.

General - Pour 60mL into the cartridge or until it's full.

For Optimum Results

- This product is most effective when the product is given more time to break down the urine
- As this product is biological, mixing with any bleach, disinfectants, acids, other chemicals or hot water (above 55°C) may reduce the effectiveness of the cleaner. Store in a dry, cool place.
- Best before within 2 years.

Technical Data

Properties

Colour - Blue
Odour - Mild fragrance
pH - Neutral
Viscosity - Liquid

Ideal for:

- Hospitality industries including hotels, motels, restaurants, clubs and pubs.
- Health care including aged care, hospitals, day clinics and other health care services.
- Government including federal, state and local run amenities.
- Educational services including schools and universities.
- Carpet and flooring cleaning services.
- Transportation services including trains, buses, boats and airplanes.
